COURSE CODE : SMEL3102L
COURSE TITLE : IT Outsourcing and Offshoring Management Lab
MODULE : INTRODUCTION TO IT OUTSOURCING AND OFFSHORING MANAGEMENT

LAB ACTIVITY (4)

Instruction:

Laboratory Activity: The Governance Command Center

I. The Scenario: Global Connect Partnership

Your company has just entered a 3-year partnership with an offshore vendor. To ensure a smooth collaboration and prevent operational chaos, a centralized system is required to define communication protocols, establish clear escalation procedures, and track the overall health of the relationship.

II. Requirements for the Governance Hub

Step 1: Create the Governance Board

Log into Jira Free.
Create a new Kanban project titled [TeamName]_Governance_Hub.
Customize the board columns to reflect the meeting lifecycle: Backlog, Scheduled, Meeting in Progress, and Action Items Tracked.

Step 2: Map the Escalation Path

Create a Task titled MASTER: Escalation Matrix.
In the Description, provide a clear table outlining the chain of command:
- Level 1 (Immediate): Project Leads
- Level 2 (24 Hours): Department Heads
- Level 3 (Critical): Steering Committee (VP Level)

Attach a file or image illustrating the issue flow from a developer up to a VP.

Step 3: Track Relationship Health

Create a Custom Issue Type or use a Label called Health_Check.
Create a ticket for a "Monthly Partnership Review."
In the Comments section, both Partner A (Client) and Partner B (Vendor) must each leave a "Sentiment Score" (1–10) and one reason for that score.
Example: "8/10: Communication has been great, but the time-zone overlap for meetings are getting difficult."

Step 4: Formal Meeting Tracking

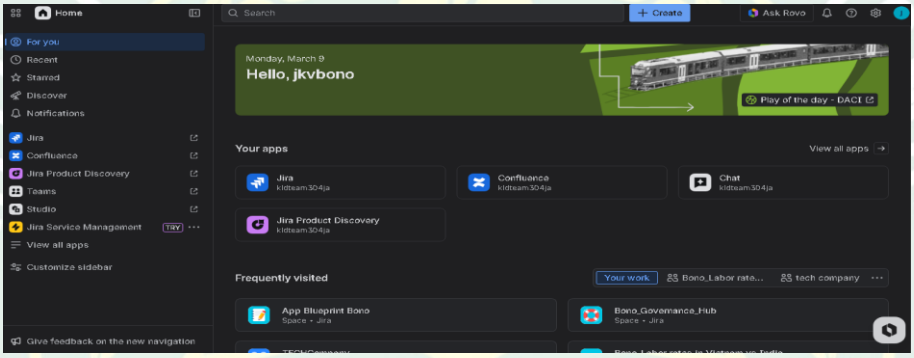
Create a ticket for a "Quarterly Steering Committee Meeting."
Use the Sub-tasks feature to create a detailed Agenda:
Sub-task 1: Review SLA Performance.
Sub-task 2: Discuss Budget for Q3.
Sub-task 3: Plan Cultural Team Building Activity.

SMEL3102L: IT OUTSOURCING AND OFFSHORING MANAGEMENT
LAB ACTIVITY 4
SECOND SEMESTER, A.Y. 2025-2026

Name: Bono, Jaira Kae V. **Score:** _____
Course/ Year and Section: BSIS 304 **Date:** 03/09/2026

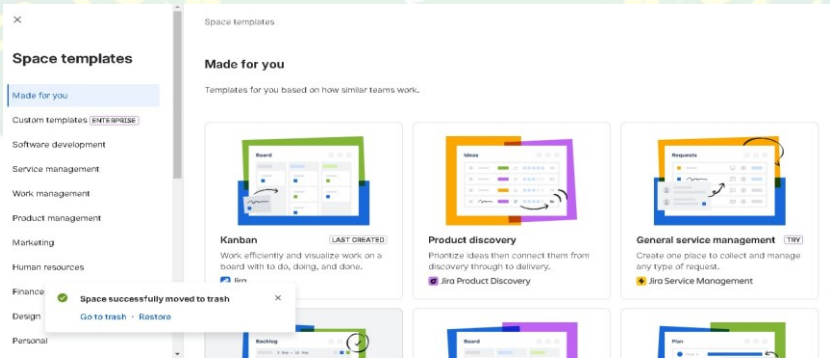
Lab Instructions: Building the Governance Hub

Step 1: Create the Governance Board



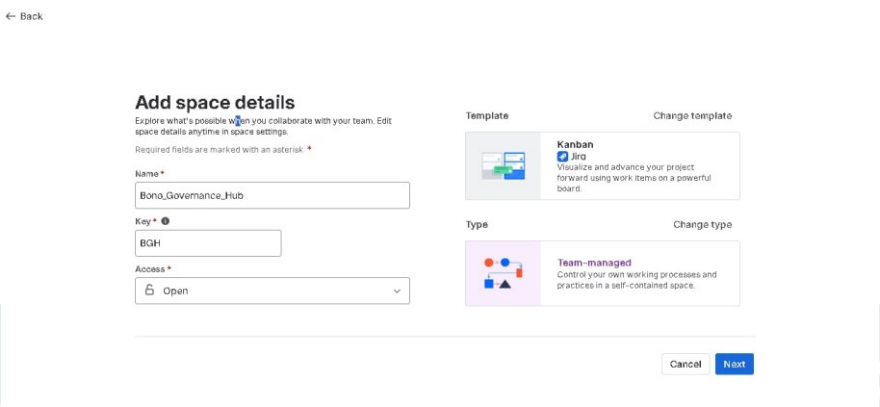
Log in to Jira

As you can see in the image above, this is my Jira dashboard. To log in, I simply visit the Jira website and use my KLD email account.



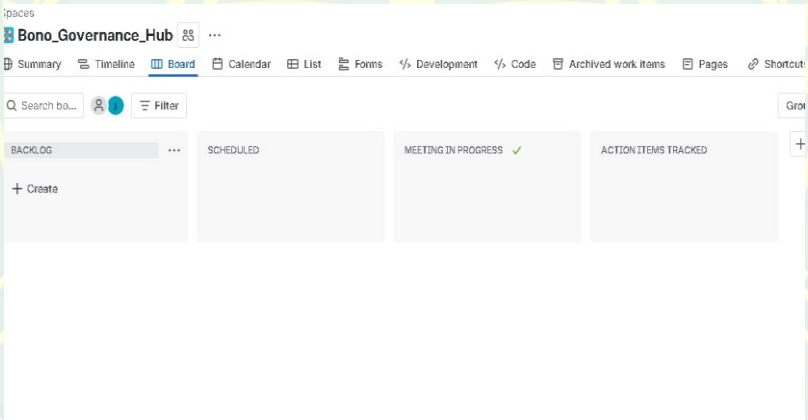
Create Kanban Project

Once logged in, you can create a new space or project by selecting a template. For this activity, I am using the Kanban Project template.



Name your Project

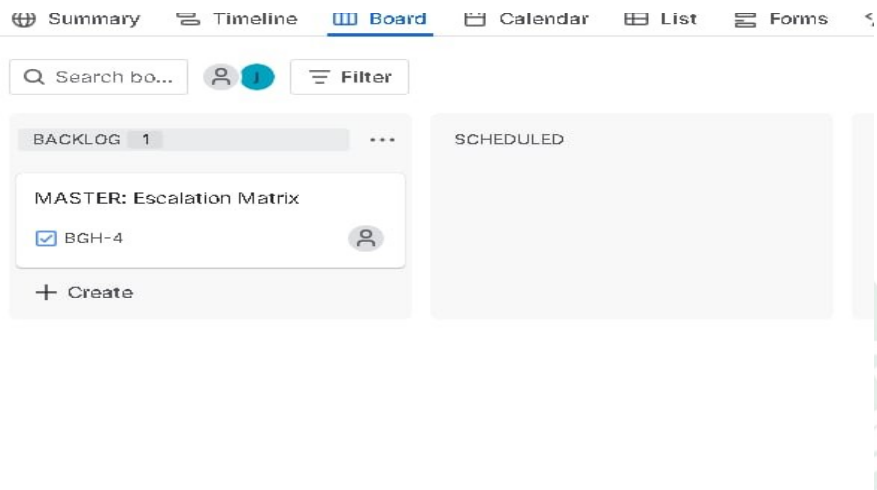
After selecting the Kanban template, I named the project according to the instructions: [TeamName]_Governance_Hub. Following the required format, I created a Kanban project titled Bono_Governance_Hub, substituting my surname for the team's name.



Customize your Columns

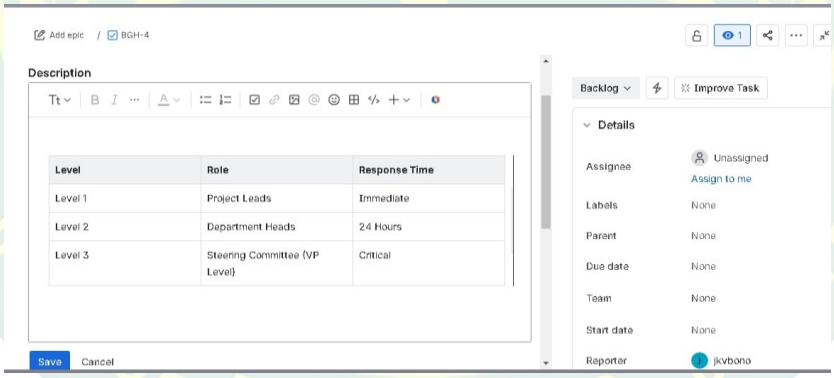
After successfully named my project, I proceeded to the space dashboard, as shown in the images above. At this stage, I then change the column names to: Backlog, Scheduled, Meeting in Progress, and Action Items.

Step 2: Map the Escalation Path



Create Task: Master: Escalation Matrix

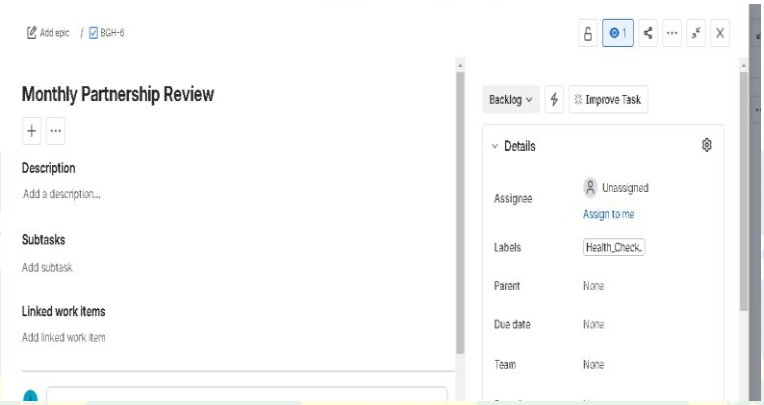
For Step 2, after renaming the columns on my space dashboard, I proceeded to create a task titled MASTER: Escalation Matrix.



Create Table in the Description

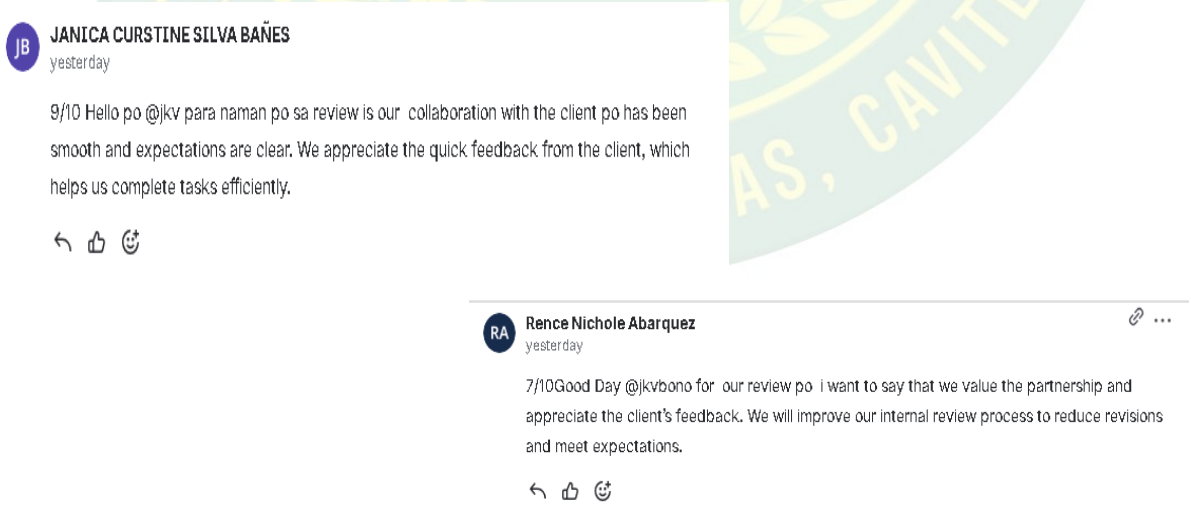
Following the creation of the 'MASTER: Escalation Matrix' task, I developed an escalation table. It categorizes responses into three levels: Immediate (Project Leads), 24 Hours (Department Heads), and Critical (Steering Committee/VP Level).

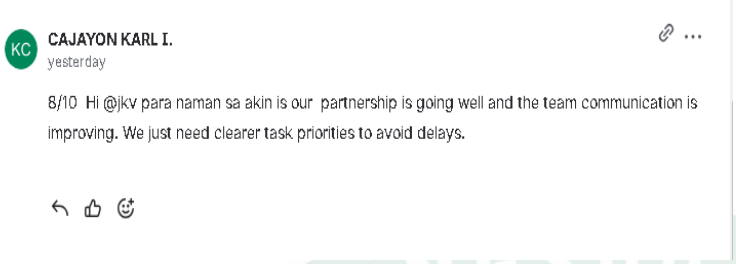
Step 3: Track Relationship Health



Creating Monthly Partnership Review

For the next phase of my project, I created a workflow to monitor project health. I began by applying a specific label called 'Health_Check' to categorize these entries. I then generated a new ticket titled 'Monthly Partnership Review' to facilitate formal feedback.

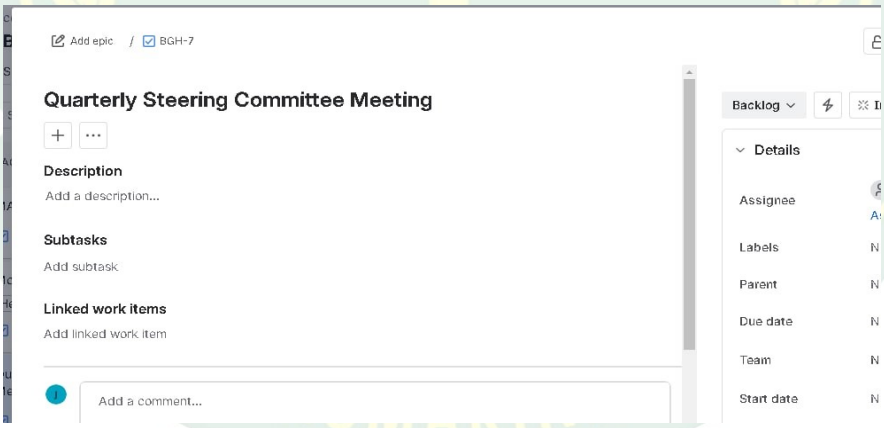




Monthly Partnership Review Conversations

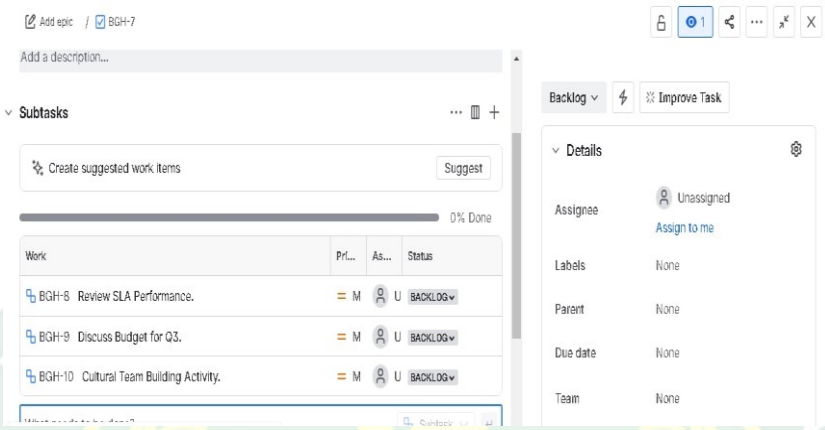
Still Part of step 3, in this part both the Client and Vendor needs to leave a score from 1 to 10 along with a brief explanation, like what you can see in the picture above my clients leave a feedback directly in the comments. One example of this from one of my client Ms. Janica which leave a comment saying "9/10 Hello po @jkv para naman po sa review is our collaboration with the client po has been smooth and expectations are clear. We appreciate the quick feedback from the client, which helps us complete tasks efficiently."

Step 4: Formal Meeting Tracking



Quarterly Steering Committee Meeting

In Step 4**,** it shows how I create another ticket titled 'Quarterly Steering Committee Meeting**.'** To ensure the meeting remains organized and all topics are covered.



Create Subtasks

After that as you can see to the pictures below by using the Sub-tasks functionality, I outlined the key agenda items: SLA Performance Review, Q3 Budget Discussion, and Cultural Team Building. This setup allows the team to track progress on each individual agenda item before the meeting concludes.
